

INSTRUCTION MANUAL AUTOMATIC TURNER

Models: AT-42/AT-42Q

Function:

This product is to turn hatching eggs automatically during incubation or storage. To prevent the embryo from sticking to the scale they need to be turned frequently. This turning system turns the eggs automatically. **This is done very slowly and once every 2 hours.**

How to use:

1. Depending on the size of the eggs put the suitable trays into the frame.
2. Use the standard trays for normal eggs, or additional trays are available for smaller egg types.
3. Always put the eggs with the tip down en NEVER with the tip up.
4. Put the automatic turning system in the correct place (incubator).
5. Connect the turning system with the adapter and connect the adapter to the power supply.
6. Check if the system is moving. This is important to prevent disappointments. Without turning the hatching results will be very poor.
7. Keep this product away from moisture.
8. **Clean after use and prevent the motor from getting wet.**
